**Note:**

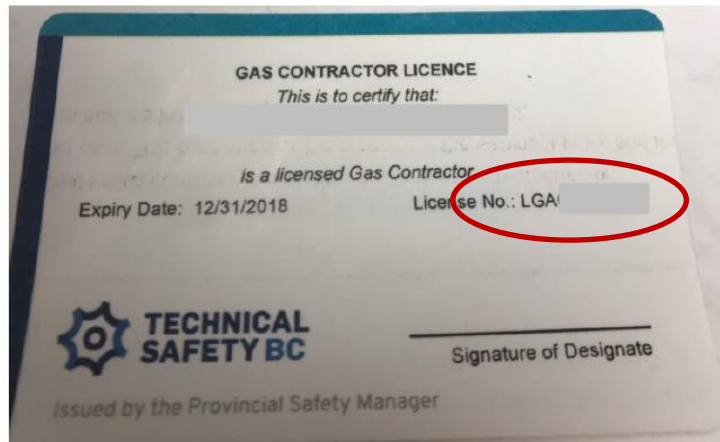

1. All single family installations with a 2lbs. meter or less – regardless of the number of BTU's require a permit through the City of Maple Ridge.
2. All other installations over 409,000 BTU's or where a single family dwelling is using a 5lbs meter require the permit to be taken out through Technical Safety BC (<https://portal.technicalsafetysafetybc.ca/forms/FRM0501>)

**PLEASE TURN PAGE OVER**

As part of our working agreement with Technical Safety BC we are required to report certain information on electrical and gas permits. To date this has not been required however, we were required to start sharing this information. Currently, in our computer system, electrical permits already capture the required certification information however our gas permits do not. Some new fields have been added into both the computer system and the gas permit application as part of the initiative.

The following two images capture the information that is required to be included as part of the application process.

Figure 1 identifies that named person who is licenced to run a gas installation company.

**FIGURE 1**

Figure 2 identifies that the individual who is a licenced and ticketed gas fitter (aka TQ).

**FIGURE 2**

This information is required to be provided on all gas permit applications, gas permit declarations and City of Maple Ridge business licences.
